Academic Projects

“Online Voting System”

Platform: MYSQL, PHP, HTML and CSS

Project Overview:

The Online Voting System is a web-based application. The system has a centralized database to keep records of all the Voters and Candidates and Final Results. This web-based system is time saving, work load reduced information available at time and it provide security for the data. During the election. In “ONLINE VOTING SYSTEM” a voter can use his\her voting right online without any difficulty. He\She has to fill a registration form to register himself\herself. All the entries is checked by the DATABASE which has already all information about the voter. If all the entries are correct then a USER ID and PASSWORD is given to the voter, by using that ID and PASSWORD he\she can use his\her vote. If conditions are wrong then that entry will be discarded. Similarly, candidates can create their profile and can participate in the election after admin verifies them.

“Easy Travel”

Platform: MYSQL, PHP, HTML and CSS

Project Overview:

The Travel Management System is a PHP and MySQL web application designed to streamline travel bookings and itineraries for Guides, Agencies and Travelers. It offers secure user authentication, role-based access, Travel package management, online Trip and Guide bookings, and search best agencies information easily. And an Admin and Guide panel for monitoring and reporting enhance usability. This system improves operational efficiency and customer satisfaction through a dynamic, scalable, and secure platform.
